

# Gas Detection For Life

## Distributor Announcement

November 21, 2018

# 11.7eV PID

*Now Available With  
GX-6000 Multigas*

- 0 - 1000 ppm PID with 11.7 eV lamp smart sensor available with GX-6000
- Monitor carbon tetrachloride, acrylonitrile, chloroform, methanol, and refrigerants (R-143, R-132A), and more
- 2 month warranty on 11.7 eV lamp
- The only **multi-gas** monitor available with an 11.7 PID option
- GX-6000 is the only **multi-gas** monitor with 2 PID sensor options in one instrument

# 11.7eV PID

## Now Available With GX-6000 Multigas

RKI is excited to announce the availability of our latest PID sensor with an 11.7 eV lamp. The 11.7 PID sensor is ideal for monitoring gases such as carbon tetrachloride, acrylonitrile, chloroform, methanol, and refrigerants (R-143, R-132A).

The GX-6000 is the first and only **multi-gas instrument with an 11.7 PID sensor option**.

Traditional solutions include a single gas monitor with an 11.7 PID sensor. If there are other requirements like confined space safety, a second instrument would be required. Now the GX-6000 provides the flexibility to configure an instrument for multiple applications. This reduces the need to purchase

separate instruments for specific applications.

The GX-6000 is also the only instrument available with the ability to have **2 separate PID sensors within one instrument**. As a six gas configuration, the GX-6000 can include the standard 4 confined space gases, and have 2 smart sensor slots available to plug and play from any of the GX-6000's four PID sensor options (10.6 low range, 10.6 high range, 10.0 with Benzene specific, or the new 11.7 PID sensor).

### Ordering info:

Below, is a link to the current price list for the GX-6000. On the price configurator page of the price list, there is a new sensor slot letter option for the 11.7 PID sensor, letter Y, which includes an 11.7 PID sensor added to a GX-6000 as well as a dehumidifier filter, a charcoal filter, and a cleaning kit.

If you are interested in upgrading an already purchased GX-6000, a sensor upgrade kit is available, part # 75-0040 for \$2,200, which also includes the dehumidifier filter, the charcoal filter and cleaning kit. An already purchased instrument will require a firmware update in order to accept the new 11.7 PID sensor. Call RKI technical support for instruction on this firmware update. It is recommended that instruments be returned to RKI for upgrade. Instruments will be reprogrammed at no charge, and charges will only apply to the purchase of the PID adder or any other repairs needed
