

Gas Detection For Life

Distributor Announcement

March 1, 2019

“Lite” Seriously? GX-6000 is 40% Lighter!

40% Lighter

When compared with other instruments, the GX-6000 stands out as the smallest and lightest 6-gas monitor on the market. Weighing only 14 ounces, the GX-6000 is over 40% lighter than the competition.

“Lite” Seriously? GX-6000 is 40% Lighter!

Slim Design top view

Easy-to-hold & Easy-to-read

The GX-6000 is designed to fit in your hand comfortably and be impact resistant with an easy-to-grip rubber boot. Its rugged design makes it suitable for the nastiest environments and still comfortable to wear all day. The large auto-rotating display features gas measurements in bold lettering with auto-backlight, as compared to other instruments.

The simultaneous gas readings are easy to read in both daylight and dark environments as well as from a distance.

11.7 PID

The GX-6000 is also the first and only multi-gas instrument with an 11.7 PID sensor option. Traditional solutions include a single gas monitor with 11.7 PID sensor. If there are other requirements like confined space safety, a second instrument would be required. Now the GX-6000 provides the flexibility to configure an instrument for multiple applications. This reduces the need to purchase separate instruments for specific applications.

2 PID's in one instrument

Furthermore, it is the only instrument available with the ability to have 2 separate PID sensors within one instrument. As a six gas configuration, the GX-6000 can include the standard 4 confined space gases, and have 2 smart sensor slots available to plug and play from any of the GX-6000's four PID sensor options (10.6 low range, 10.6 high range, 10.0 with Benzene specific, or the new 11.7 PID sensor)

Easy to Read Gas Values

Robust

Simply put, the GX-6000 is more than just a 6-gas monitor with PID. It is a powerful handheld instrument that is capable of simultaneously monitoring combustibles, O₂, CO, H₂S, VOC's and other super toxic gases in a small lightweight design.
