

Gas Detection For Life

Distributor Announcement

July 29, 2020

Stand Alone CO2 Monitor Now Available

RKI is pleased to introduce the RI-600 stand-alone Carbon Dioxide monitor. The RI-600 uses NDIR technology to detect Carbon Dioxide in five different ranges including PPM and % volume. Its sleek, low-profile design is equipped with a unique tri-color display which changes color as Carbon Dioxide levels reach each alarm level.

Plug and Play Option

Take advantage of the plug and play version with the 115 VAC power option. The RI-600 comes ready to operate with a simple wall-mount bracket and 10 foot power cord. Alternatively, the RI-600 can be hardwired to a system using the 24 VDC power option.

Beverage Dispensing Fire Codes

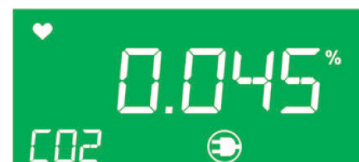

Local and international fire codes require beverage dispensing applications with 100 lbs or more of CO2 on site, to have gas monitoring with audible and visual alarms at 5,000 ppm and 30,000 ppm. The RI-600 has audible and visual alarms as well as standard alarm points of 5,000 ppm and 30,000 ppm. Part# 73-1206-50RK is the plug and play 115 VAC version with 5,000 ppm and 30,000 ppm alarm points. The RI-600 is a simple and economical solution for beverage dispensing locations using CO2.

Red = Alarm 2

Yellow = Alarm 1

Green = Normal

Stand Alone CO2 Monitor
